## DETAILED ACTION

### *Priority*

Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by *Hueton et al.*

(5,459,325).

As to **claims 1-2**, Hueton discloses a high-speed fluorescence scanner, comprising:

a light source (11);

a photoelectric reading means (19);

a sample holding portion (10);

an optical head (22) which lead the light beam emitted by the light source to the target placed on the sample holder so that the target is irradiated and which leads the emitted light to the photoelectric reading means;

primary scanning means (21,27) for moving the optical head on one direction with respect to the target;

secondary scanning means for moving the sample holding portion (col. 4, lines 9-20); and

• Art Unit: 2877

a lens (12) in the optical path between the induced light and the photoelectric reading means, the lens having sufficient refractive power for collecting induced light led toward the photoelectric reading means (col. 4, lines 30-35).

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over *Hueton et al.* (5,459,325) in view of *Fujimiya et al.* (5,242,567).

As to **claims 5-6**, Hueton provides scanning an electrophoretic target to simulate fluorescence (col. 2, lines 20-30 and col. 4, lines 15-27), but fails to provide details of the target, however it is well known, as evidenced by Fujimiya, that an electrophoretic sample is labeled with a dye poured into a gel base (col. 2, lines 43-46). It would have been obvious to one having ordinary skill in the art at the time of invention to allow for separation and identification of sample components by weight.

### ***Allowable Subject Matter***

Claims 3-4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

• Art Unit: 2877

The following is a statement of reasons for the indication of allowable subject matter: the prior art of record, taken alone or in combination, fails to disclose or render obvious secondary scanning means to move the optical head and first and secondary optical element, one moved with the scanning head and one stationary, in combination with the rest of the limitations of the claim.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
